

## CodeUpdater 3.2.0 Release Notes

The following is a list of features, enhancements, and fixes implemented in the latest Tempest® CodeUpdater release:

### Application Details:

	Application
Version:	3.2.0
Release Date:	February 25, 2015

Note: CodeUpdater 3.2.0 is required for ETSI-compliant firmware updates (Tempest SKUs ending in "EU") Non-EU models are non-compliant with ETSI standards.

### New Enhancements:

In response to the recent changes in the European Telecommunications Standards Institute (ETSI) EN 300 328 V1.8.1 standards, this latest version of Tempest CodeUpdater has been released, in conjunction with Tempest 3.20.00 firmware, to support end-users with firmware compatibility. Please check our website for the latest system specifications and certifications.

Going forward, there will be two sets of Tempest SKUs: one for European Union (CE) use and one for everywhere else. All Tempest models (regardless of frequency or region) will utilize the same firmware; however, CodeUpdater will display the firmware version for Tempest models ending with "EU" as "x.xx.xxEU" (i.e., 3.20.00EU). In addition, once loaded, the firmware version will be displayed as "x.xx.xxEU" (i.e., 3.20.00EU) on those Tempest models.

In order to maintain ETSI compliance, previous versions of firmware are prevented from being loaded onto Tempest models ending with "EU". If a user attempts to load previous (incompatible) firmware onto an "EU" SKU, they will be prompted with this message: Firmware File Is Not Compatible.
